From the Desk of the CEO

Rod Burkett

I'm old enough now to have my oldest grandson starting college in mid-August. This brings to mind the old adage of wishing to be as knowledgeable as you are now, but desiring to transport yourself back to those college age years. No matter how appealing that sounds, I don't think any of us would really want to have such an experience.

Whether you are 8 years old, or 18, or 80, we always want to hang with our friends and interact with our peers. While there's benefits for all in mixing in intergenerational gatherings, we seem to have a natural desire to engage with our own age cohort, and to learn and grow with people that are representative of our specific age group. People of similar ages seem to have a wealth of like experiences that serves as a foundation for further discussion and deeper connections.

I'll let his parents give him the traditional "be smart-careful-safe" lecture that we all seem to receive when we leave the nest, while I'll take a shot at sharing some sage grandfatherly advice (assuming I have some). Such as, "Yes, follow your parent's advice and study hard, but there's just as much to learn outside the classroom as in. Be wide-open to learning and appreciating both the similarities and differences that you witness in people and their different backgrounds and personalities. As long as you are in a learning and growing mindset, your mistakes will be smaller and easier to recover from....and be ready next weekend, your old "Pa" will swing by to take you to a baseball game, and you can share what you're experiencing....and maybe I'll learn something from you!"

Healthy Aging and Fall Prevention

September is Healthy Aging Month. The week of Sept. 22 through 28 is Fall Prevention Awareness Week.

Healthy Aging

The purpose of Health Aging Month is to raise awareness of the positive aspects of growing older.

Tips for healthy aging include staying physically and mentally active and socially engaged. Maintaining a healthy diet. Getting a good night's sleep. Not smoking. Engaging in activities you enjoy. Seeing your doctor regularly. And surrounding yourself with people who make you laugh.

Fall Prevention

Falls are not a normal part of growing older. The national Fall Prevention Awareness campaign is designed to increase awareness about the impact of falling and to let you know about precautions you can take to reduce your risk. Tips for fall prevention include . . .

Staying physically active. Regular exercise improves muscles, makes you stronger, helps keep you flexible, and may slow bone loss.

Have your balance, eyes and ears checked. Even small changes to your vision and hearing may increase the likelihood that you will fall.

Wear non-skid, rubber-soled, low-heeled shoes.

Fall-proof your home. Keep the areas where you walk free from clutter. Don't use small area rugs or throw rugs.

Get up slowly out of a chair or a bed.

Be sure you are getting enough calcium and Vitamin D.

Limit the amount of alcohol you drink.

Learn about the potential side effects of any medications you are taking. Tell your doctor or the staff at the community where you live if a drug makes you feel sleepy or dizzy.

Use an assistive device if you need help feeling steady when you walk. Make sure the device is properly adjusted for your height.

WELLNESS

Safe Room Temperatures for Seniors

Deborah Denham RN, MSN, CPPS, CPHRM

Visiting my grandparents in the summer was a lot of fun. But, if you were to ask me or my sisters what they remember about Grandma and Grandpa's house is that it was so hot. It never felt like the air conditioner was running and in the winter, you felt like you would melt.

This rule was more than likely present in your home growing up or when raising your family, no one touches the thermostat. It was the rule in my grandparent's house, my parent's house and now, much to the frustration of my son, it is the rule in my house.

But what is too warm in a home?

For the elderly, maintaining the right indoor temperatures isn't only a matter of comfort, but also a matter of health. During the summer months, seniors can be at an increased risk for heatstroke. During the winter, the risks are just as severe.

According to research in the journal *Age and Aging*, it only takes 45 minutes for a chilly room temperature to have a significant impact on the elderly. It's enough time for strength to decrease in most major muscle groups. That includes the quadriceps, which are necessary for standing and walking.

With reduced strength, there is an increased risk of suffering a fall.

When it comes to ambient room temperature, different people have different comfort zones. That's because a variety of factors can impact how warm a person feels. People who do not maintain their weight have a tougher time staying warm.

Apart from the room temperature, there are a variety of things which can affect a person's sense of warmth. Poor hydration, anemia, insufficient sleep, and vitamin deficiencies in B-12 or iron can all contribute to feeling cold. Feeling chilly can also be a side effect of several medications.

The ideal room temperature for seniors varies slightly because it can be impacted by a person's health. However, the average room temperature for elderly people is about 78°F.

This may be uncomfortable for some and adjusting the thermostat to keep the home at a comfortable and safe temperature is important. Just be careful to not go above 78°F or below 65°F.

Recipe Corner

Peach Strawberry Popsicle

- 3 c. or 1.5 c. pureed strawberries
- 3 c. or 1.5 c. pureed peaches
- 2 Tbs. Honey
- 2/3 c. yogurt

Directions

1. Wash all the fresh produce
2. Slice the strawberries and skim and slice the peaches
3. Puree the fruit together in a food processor or blender. Add in the honey and yogurt and mix until smooth.
4. Pour mix into molds. You can use an ice cube tray or a popsicle tray. Put your sticks in and freeze overnight.
5. Pop out the popsicles when needed, and enjoy!

A Note from the Administrator

Jerilyn McCullough-Gooding

September is Self-Improvement Month

How can we define self-improvement?

Self-improvement is an inner process, which focuses on changing one's attitude toward oneself and toward the world, and on getting rid of harmful habits and building good new habits.

The purpose of this inner process is to improve your behavior and habits, and to create happiness and satisfaction into your life.

Another purpose is to improve the ability to cope with the various situations that you encounter in your life.

The aims of self-improvement are to learn to adopt a positive mindset, to get rid of negative habits, and to build positive habits and behavior.

It is a process to make ourselves better and happier people.

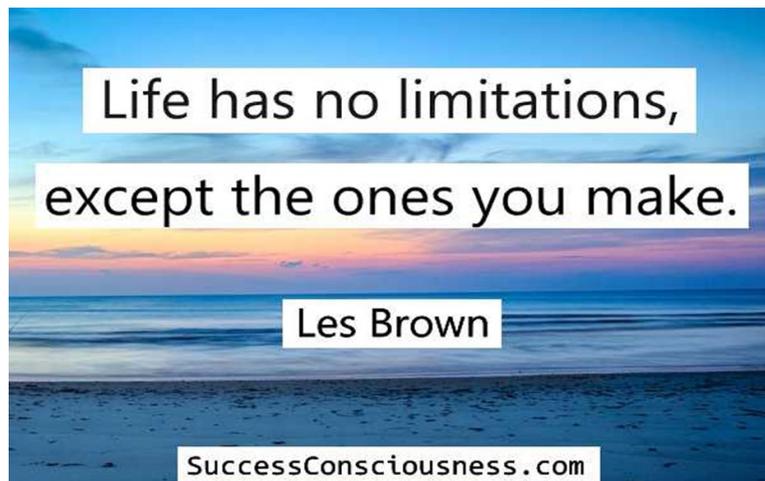

Self-improvement usually starts by becoming more aware of ourselves, our behavior, and our reactions. It requires that we earnestly desire to improve ourselves, better our life, and build good relations with people.

It also starts when we stop being afraid to leave our comfort zone.

Self-improvement improves your mental health, and helps you become aware of any bad habit, so you can change it. It also improves your life and helps you achieve your goals.

This process includes simple steps to make you feel good about yourself, learn new skills, and even practice physical activity to improve your health and energy level.

Reading books and articles with self-improvement tips and information, learning from online courses and repeating positive affirmations, are most helpful.
